

ACCENT DIGITAL

SCULPTED PANELS

SCULPTED PANELS

Accent Digital is a designer and manufacturer of a large selection of sculpted panels.

Accent Digital offers an extensive collection of sculpted wood panels allowing great flexibility in the design of interior surfaces and textures. Unique and exclusive manufacturing and finishing processes allow Accent Digital to deliver a superior finish, exempt from the usual challenges met when applying finish to a sculpted surface. In addition, our rigorous quality control ensures impeccable quality and consistency. Products of this collection are usually sold with a primed surface ready to receive final coats of paint. The final paint can be standard architectural paint (latex or acrylic) and can be applied either by Accent Digital in the factory or by the customer following installation.

Panels are made from superior quality fiber panels characterized by a high density which allows high precision sculpting. High product uniformity is achieved through state-of-the-art digital equipment. Products can also be made from other substrates in specialized applications (fire-retardant MDF, moisture-proof MDF, solid surface, etc.). The standard panel size varies from pattern to

pattern but is usually 1,220 mm x 2,440 mm (4' x 8'). Dimensions can be customized (depending on the pattern chosen) and can reach a maximum of 1,220 mm x 3,048 mm (4' x 10').

Most patterns continue from panel to panel and the large size of the panels helps to minimize the number of joints between the panels. These joints can be hidden to create large uniform surfaces, if desired.

Accent Digital is the specialist to consult when traditional flat surfaces are no longer sufficient to express your artistic or architectural vision. We offer an ever-growing range of products and an ability to produce custom designs.

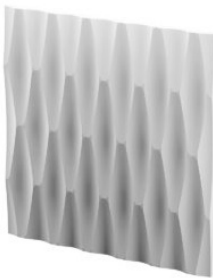

Please visit our website to view our up-to-date range of products and sculpted patterns and for more information.

And contact us to discuss your project!

CUSTOM SIZES

Panel sizes can be customized to a maximum of 1220mm x 3048mm.

To preserve the continuity of the pattern from a panel to another, certain dimensions must be respected.

The recommended minimum thickness represents the thickness of the panel before it is sculpted. Depending on your requirements, the patterns can be sculpted in a thinner or thicker panel.

ORIENTATION

Most patterns can be oriented horizontally or vertically.

CUSTOM PATTERNS

We can design custom patterns.
